

# Hydraulic cylinder Mill type

RE 17338/01.16  
Replaces: 07.13

1/74

## Series CDH3 / CGH3 / CSH3

Component series 3X  
Nominal pressure 350 bar (35 MPa)

H4645\_d

## Table of contents

### Contents

Features	1	Pin assignment for Profibus	49
Technical data	2, 3	Plain clevis CSA	50
Project planning software ICS	3	Swivel head CGA	51
Diameters, areas, forces, flow	4	Swivel head CGAK	52, 53
Tolerances according to ISO 6020-1	4	Swivel head CGAS	54, 55
Overview types of mounting: Series CDH3 and CGH3	5	Kinking	56
Ordering code series CDH3 and CGH3	6 ... 9	Admissible stroke length	56 ... 58
Types of mounting and dimensions CDH3 and CGH3	10 ... 21	End position cushioning	59 ... 61
Ordering code, overview of types of mounting CSH3	22, 23	Selection criteria for seals	62
Types of mounting and dimensions CSH3	24 ... 35	Seal kits	63 ... 67
Flange ports	36, 37	Tightening torques	68
Subplates for valve mounting	38 ... 41	Spare parts: Series CDH3	69
Bleeding / measuring coupling	42	Spare parts: Series CGH3	70
Throttle valve	42	Spare parts: Series CSH3 MP3 and MP5	71
Proximity switch	43 ... 45	Spare parts: Series CSH3 MF3, MF4, MT4 and MS2	72
Position measurement system	46 ... 48	Cylinder weight	73

## Features

- 6 types of mounting
- Piston Ø (**ØAL**): 40 to 320 mm
- Piston rod Ø (**ØMM**): 28 to 220 mm
- Stroke lengths up to 6 m
- Self-adjusting and adjustable end position cushioning

Project planning software Interactive Catalog System

## Technical data (For applications outside these parameters, please consult us.)

---

### Standards:

Bosch Rexroth standard; main dimensions like piston Ø and piston rod Ø correspond to ISO 3320.

### Nominal pressure: 350 bar

Static test pressure: 525 bar

Reduced test pressure: 315 bar

Higher operating pressures upon request

The specified operating pressures apply to applications with shock-free operation with regard to excess pressure and/or external loads. With extreme loads like e. g. high sequence cycle, mounting elements and threaded piston rod connections must be designed for durability.

### Minimum pressure:

Depending on the application, a certain minimum pressure is required in order to guarantee good functioning of the cylinder. Without load, a minimum pressure of 10 bar is recommended for differential cylinders; for lower pressures as well as double-acting cylinders, please contact us.

### Installation position: any

### Hydraulic fluid:

Mineral oils DIN 51524 HL, HLP

Oil-in-water emulsion HFA

Water glycol HFC

Phosphate ester HFDR

Polyol ester HFDU

For further information on hydraulic fluids refer to data sheet 90223.

**Hydraulic fluid temperature range:** see page 62

**Ambient temperature range:** see page 62

**Optimum viscosity range:** 20 to 100 mm<sup>2</sup>/s

**Minimum admissible viscosity:** 12 mm<sup>2</sup>/s

**Maximum admissible viscosity:** 380 mm<sup>2</sup>/s

### Cleanliness class according to ISO:

Maximum admissible degree of contamination of the hydraulic fluid according to ISO 4406 (c) class 20/18/15.

The cleanliness classes specified for the components need to be met in hydraulic systems. Effective filtration prevents faults and simultaneously increases the life cycle of the components.

For the selection of the filters see

[www.boschrexroth.com/filter](http://www.boschrexroth.com/filter)

### Bleeding by default: secured against screwing out

**Primer coat:** By default, hydraulic cylinders are primed with a coating (color gentian blue RAL 5010) of min. 40 µm. Other colors upon request.

With cylinders and attachment parts, the following surfaces are not primed or painted:

- All fit diameters to the customer side
- Sealing surfaces for line connection
- Sealing surfaces for flange connection
- Connection surfaces for valve mounting
- Inductive proximity switches
- Position measurement system

The areas that are not painted are protected by means of a solvent-free corrosion protection agent.

In the online order system, more painting systems can be selected. These systems are not displayed via the type key and not automatically considered when ordering replacement cylinders. Accessories that are ordered as separate order items are not primed or painted by default. Corresponding priming and/or painting on request.

**Stroke velocity:** Please observe the guideline on max. stroke velocities (with recommended flow velocity of 5 m/s in the line connection) in the table. Higher stroke velocities on request. If the extension velocity is considerably higher than the retraction velocity of the piston rod, drag-out losses of the medium may result. If necessary, please consult us.

Piston Ø (mm)	Line connection	Max. stroke velocity in m/s
40	G1/2	0.31
50	G1/2	0.20
63	G3/4	0.28
80	G3/4	0.18
100	G1	0.20
125	G1 1/4	0.20
140	G1 1/4	0.16
160	G1 1/2	0.18
180	G1 1/2	0.14
200	G1 1/2	0.11
220	G1 1/2	0.09
250	G1 1/2	0.07
280	G1 1/2	0.06
320	G1 1/2	0.04

## Technical data (For applications outside these parameters, please consult us.)

### Boundary and application conditions:

- The mechanical alignment of the movement axis and thus the mounting points of hydraulic cylinder and piston rod must be ensured. Lateral forces on the guides of piston rod and piston are to be avoided. It may be necessary to consider the own weight of the hydraulic cylinder (MP3/MP5 or MT4) or the piston rod.
- The kinking length/kinking load of the piston rod and/or the hydraulic cylinder must be observed (see page topic Kinking).
- The maximum admissible stroke velocities with regard to the suitability/load of seals must be observed as must their compatibility with the properties of the fluid type (see page topic Seals).
- The maximum admissible velocities/kinetic energies when moving into the end positions, also considering external loads, must be observed.  
Danger: excess pressure
- The maximum admissible operating pressure must be complied with in any operating state of the hydraulic cylinder. Possible pressure intensification resulting from the area ratio of annulus to piston area and possible throttling points are to be observed.
- Detrimental environmental influences such as aggressive finest particles, vapors, high temperatures, etc. as well as contamination and damage of the hydraulic fluid are to be avoided.

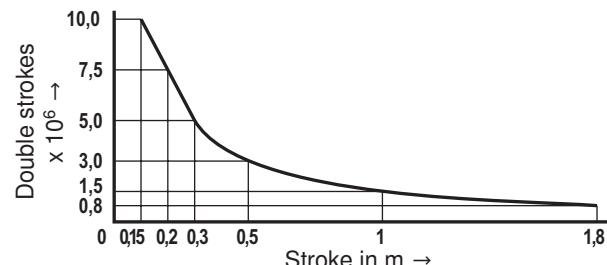

### Notice:

- This list does not claim to be complete. In case of questions regarding the compatibility with the medium or exceedance of the boundary or application conditions, please contact us.
- All graphical representations in the data sheet are examples. The product supplied may therefore differ from the figure shown.

### Life cycle:

Rexroth cylinders correspond to the reliability recommendations for industrial applications.

$\geq 10\,000\,000$  double strokes in idle continuous operation or 3000 km piston travel at 70 % of the maximum operating pressure, without load on the piston rod, with a maximum velocity of 0.5 m/s, with a failure rate of less than 5 %.

### Acceptance:

Each cylinder is tested according to Bosch Rexroth standard and in compliance with ISO 10100: 2001.

### Safety instructions:

For the assembly, commissioning and maintenance of hydraulic cylinders, the operating instructions 07100-B have to be observed!

Service and repair work has to be performed by Bosch Rexroth AG or by personnel especially trained for this purpose. No warranty is accepted for damage as a consequence of assembly, maintenance or repair work not performed by Bosch Rexroth AG.

### Check lists for hydraulic cylinders:

Cylinders the characteristics and/or application parameters of which deviate from the values specified in the data sheet can only be offered as special version upon request. For offers, the variations of the characteristics and/or application parameters must be described in the check lists for hydraulic cylinders (07200).

## Project planning software ICS (Interactive Catalog System)

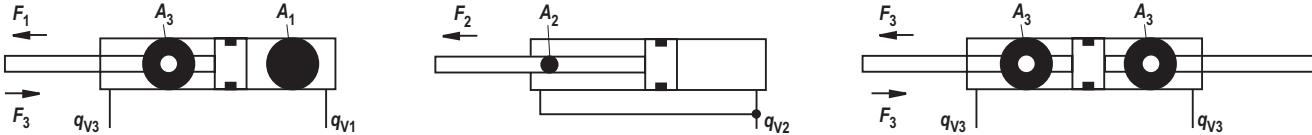

The ICS (Interactive Catalog System) is a selection and project planning help for hydraulic cylinders. The ICS allows designers for machines and systems to quickly and reliably find the perfect hydraulic cylinder solution through logic-guided type key enquiries. This software helps to solve design and project planning tasks more quickly and efficiently.

After having been guided through the product selection, the user quickly and reliably gets the exact technical data of the selected component as well as 2D and 3D CAD data in the correct file format for all common CAD systems.

This allows users to reduce costs while increasing their competitiveness.

## Diameters, areas, forces, flow

Piston	Piston rod	Area ratio	Areas			Force at 350 bar <sup>1)</sup>			Flow at 0.1 m/s <sup>2)</sup>			Max. available stroke length

## Overview types of mounting: Series CDH3 and CGH3

### CDH3 MP3

see page 10, 11

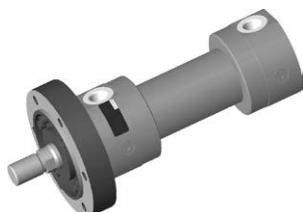

### CDH3 MP5

see page 12, 13

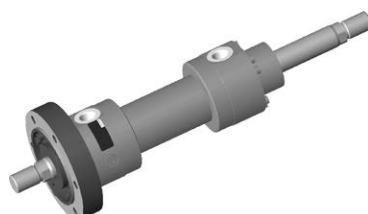

### CDH3 MF3

see page 14, 15

### CGH3 MF3

see page 14, 15

### CDH3 MF4

see page 16, 17

### CDH3 MT4

see page 18, 19

### CGH3 MT4

see page 18, 19

### CDH3 MS2

see page 20, 21

### CGH3 MS2

see page 20, 21

## Ordering code series CDH3

### Additional options

		Fields for additional options					
	Z						
Inductive proximity switches without mating connector		<sup>37)</sup> = E					-P = <sup>38)</sup> Order-relevant information
Mating connector - separate order see page 44		= W					<b>no code =</b> According to ordering codes
without inductive proximity switches							
Additional guide rings		<sup>10), 28)</sup> = F					Y = Specify the piston rod extension LY in the plain text in mm
without additional guide rings		= W					W = Without piston rod extension
Measuring coupling, on both sides			= A				A = <sup>14), 35)</sup> Spherical bearing, maintenance-free
without measuring coupling			= W				B = Flanged grease nipple
							W = Standard conical grease nipple

### Order examples:

Without additional options:

CDH3MP5/100/56/300A3X/B11CADMW

With additional options:

CDH3MP5/100/56/300A3X/B11CADMZ EWABW

With order-relevant information:

CDH3MP5/100/56/300A3X/B11CADMW-P

CDH3MP5/100/56/300A3X/B11CADMZ EWABW-P

- 1) Only piston Ø 40 to 200 mm
- 2) Trunnion position freely selectable. When ordering, always specify the "XV" dimensions in the plain text in mm.
- 3) Max. available stroke length page 4 and admissible stroke length (acc. to kinking calculation) observe pages 56 to 58.
- 4) Not possible with MF4.
- 5) Piston Ø 40 to 80 mm, only position 11, subplates only possible in combination with line connection "B" at the head
- 6) Piston Ø 63 to 200 mm, only position 11, subplates only possible in combination with line connection "B" at the head
- 7) Piston Ø 125 to 200 mm, only position 11, subplates only possible in combination with line connection "B" at the head
- 10) Seal design A, B not possible;  
piston Ø 220 to 320 mm standard
- 13) Not with piston Ø 320 mm
- 14) Not possible with swivel head "N".
- 15) Subplates for SL and SV valves (isolator valves) Note:  
Seal designs T, G, L, R, S and V are not designed for the static holding function!
- 19) Only piston rod Ø 28 to 160 mm
- 24) Only piston rod Ø 28 to 140 mm
- 25) Only piston Ø 63 to 320 mm
- 26) Only piston Ø 40 to 250 mm
- 27) Maximum operating pressure 315 bar
- 28) With seal design "L" standard
- 30) All graphical representations in the data sheet show position 1
- 31) With MS2, only position 11 is possible
- 34) With MF4 and line connection B, M or C not possible
- 35) Not possible with MP3
- 37) Min. stroke length = 20 mm
- 38) Marks order-relevant information which cannot be represented in the ordering code. It must be specified for each order.

ØAL = Piston Ø

ØMM = Piston rod Ø

X\* = Stroke length

X\*min = Min. stroke length

1) Bleeding: With view to the piston rod, the position is offset by 90° in relation to the line connection (clockwise).

2) Ø D4 max. 0.5 mm deep

3) Throttle valve only with end position cushioning "E" (180° for bleeding)

4) Flange connections see separate table pages 36 and 37

5) Thread design "G"

6) Thread design "A"

7) Dimensions for cylinders with seal design M, T, G, L, R, S and V

8) Dimensions for cylinders with seal design A and B

9) Observe the min. stroke length "X\*min"

10) When ordering, always specify the "XV" dimension in the plain text. Preferred XV dimension:

Observe the trunnion position in the cylinder center XVmin and XVmax

11) XVcent recommendation:

Trunnion position in cylinder center

12) The specified dimensions are maximum values, tolerance classes 342 according to ISO 9013 Thermal cutting

16) Line connection "B" and "C"

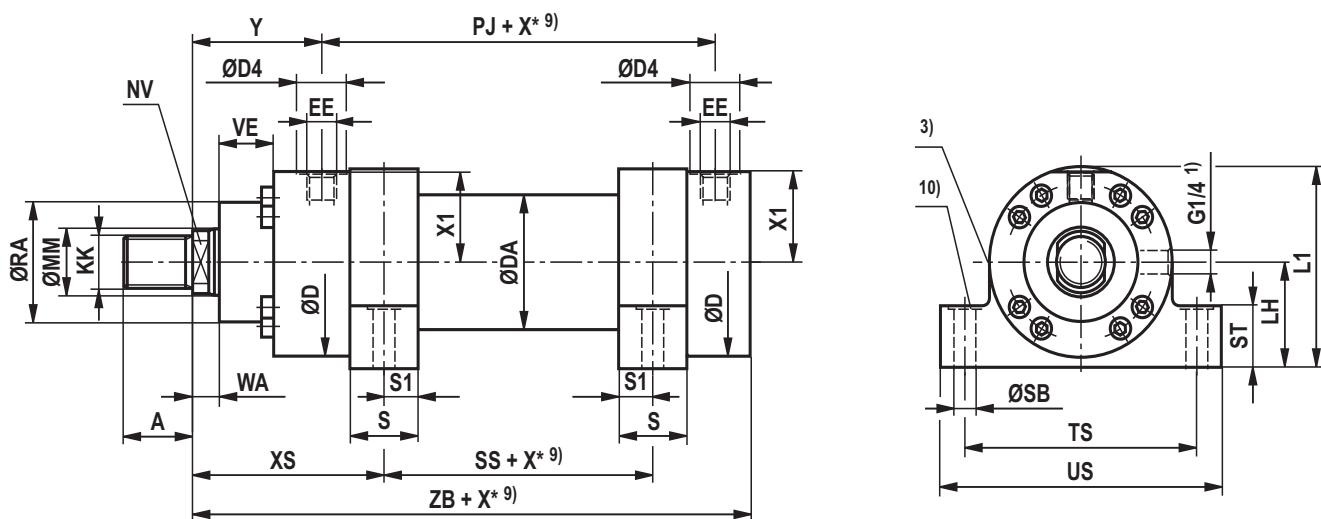

17) Line connection "M"

18) Trunnion nut with ØAL ≥ 125 mm either at head or at base side depending on the position of the trunnion (XV)

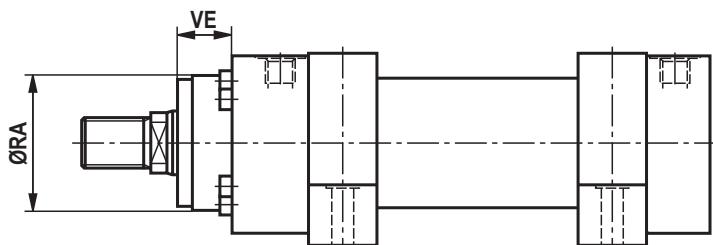

**Important installation information:** During installation, it must be ensured that the trunnion bearings are installed up to the trunnion shoulders. Any variation may reduce the product's service life.

## Foot mounting CDH3/CGH3: MS2

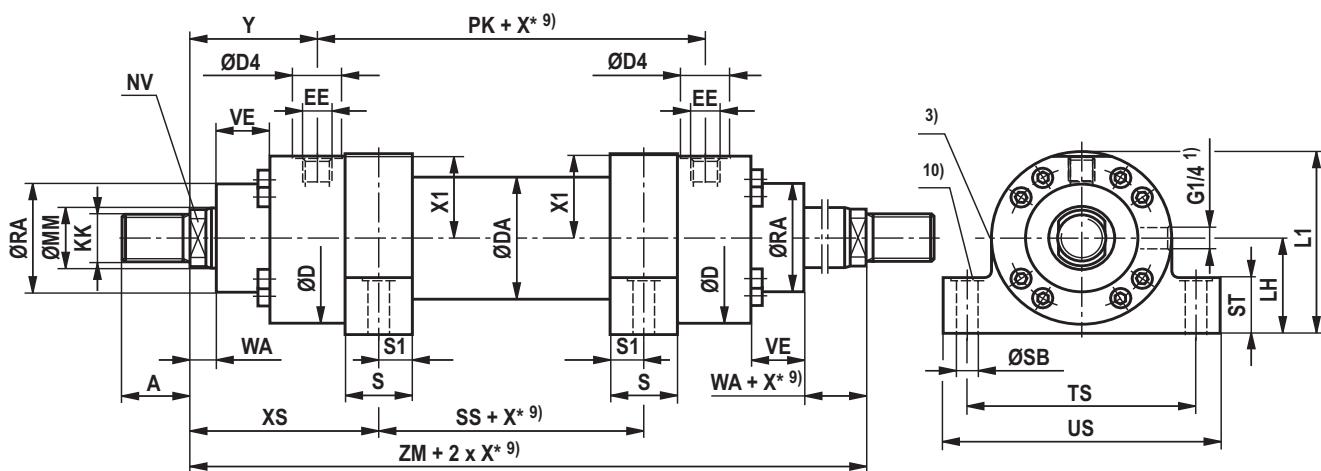

CDH3 MS2

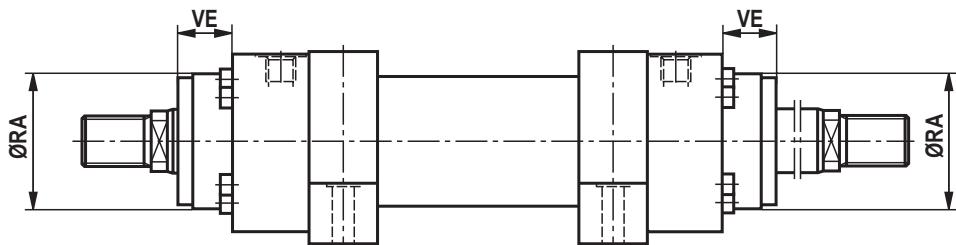

CDH3 MS2. With seal design "A", "B" and ØAL 160 to 320 mm

CGH3 MS2

CGH3 MS2: With seal design "A", "B" and ØAL 160 to 320 mm

## Dimensions CDH3/CGH3: MS2 (dimensions in mm)

CSH3MP5/100/70/300A3X/B11CAUMZ TFAWW-P

**Ordering code series CSH3**

- <sup>1)</sup> Only piston Ø 40 to 200 mm
- <sup>2)</sup> Trunnion position freely selectable. When ordering, always specify the "XV" dimensions in the plain text in mm
- <sup>3)</sup> Max. available stroke length page 4 and admissible stroke length (acc. to Kinking calculation) observe pages 56 to 58
- <sup>4)</sup> Not possible with MF4
- <sup>5)</sup> Piston Ø 40 to 80 mm, only position 11, subplates only possible in combination with line connection "B" at the head
- <sup>6)</sup> Piston Ø 63 to 200 mm, only position 11, subplates only possible in combination with line connection "B" at the head
- <sup>7)</sup> Piston Ø 125 to 200 mm, only position 11, subplates only possible in combination with line connection "B" at the head
- <sup>11)</sup> Only piston Ø 28 to 220 mm
- <sup>14)</sup> Not possible with swivel head "N".
- <sup>15)</sup> Subplates for SL and SV valves (isolator valves) Note: Seal designs T, G, L, R, S and V are not designed for the static holding function!
- <sup>18)</sup> Not standardized
- <sup>20)</sup> Possible from piston rod Ø 45 mm
- <sup>25)</sup> Only piston Ø 63 to 320 mm
- <sup>26)</sup> Only piston Ø 40 to 250 mm
- <sup>27)</sup> Maximum operating pressure 315 bar
- <sup>29)</sup> With CSH, by default with guide belts
- <sup>30)</sup> All graphical representations in the data sheet show position 1
- <sup>31)</sup> With MS2, only position 11 is possible
- <sup>34)</sup> With MF4 and line connection B, M or C not possible
- <sup>35)</sup> Not possible with MP3
- <sup>38)</sup> Marks order-relevant information which cannot be represented in the ordering code. It must be specified for each order.

ØAL = Piston Ø

ØMM = Piston rod Ø

X\* = Stroke length

X\*max = Max. stroke length

X\*min = Min. stroke length

1) Bleeding: With view to the piston rod, the position is offset by 90° in relation to the line connection (clockwise).

2) Ø D4 max. 0.5 mm deep

3) Throttle valve only with end position cushioning "E" (180° for bleeding)

4) Flange connections see separate table pages 36 and 37

5) Thread design "G"

6) Thread design "A"

9) Observe the min. stroke length "X\*min"

10) Related bolt Ø m6;

related bolt Ø j6 with maintenance-free spherical bearing

11) Standard version "W"

Lubricating nipple, cone head form A according to DIN 71412

12) The specified dimensions are maximum values, tolerance classes 342 according to ISO 9013 Thermal cutting

13) Dimensions for position transducer output "N" and "P"

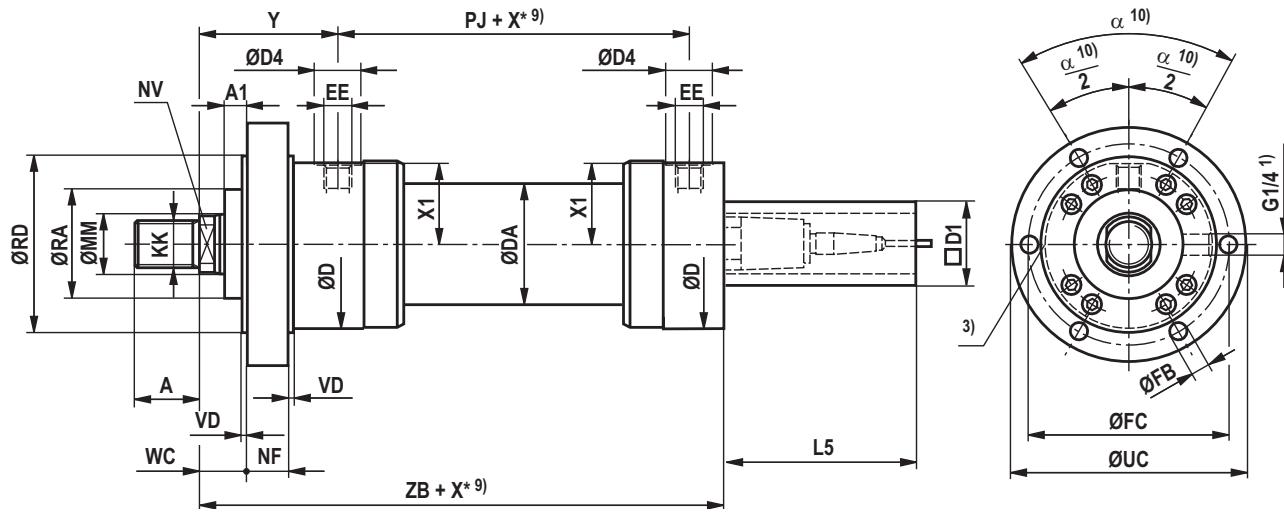

14) Dimensions for position transducer output "C", "F" and "D"

16) Line connection "B" and "C"

17) Line connection "M"

ØAL = Piston Ø

ØMM = Piston rod Ø

X\* = Stroke length

X\*max = Max. stroke length

X\*min = Min. stroke length

1) Bleeding: With view to the piston rod, the position is offset by 90° in relation to the line connection (clockwise).

2) Ø D4 max. 0.5 mm deep

3) Throttle valve only with end position cushioning "E" (180° for bleeding)

4) Flange connections see separate table pages 36 and 37

5) Thread design "G"

6) Thread design "A"

9) Observe the min. stroke length "X\*min"

10) When ordering, always specify the "XV" dimension in the plain text. Preferred XV dimension: Observe the trunnion position in the cylinder center XVmin and XVmax

11) XVcent recommendation: Trunnion position in cylinder center

12) The specified dimensions are maximum values, tolerance classes 342 according to ISO 9013 Thermal cutting

16) Line connection "B" and "C"

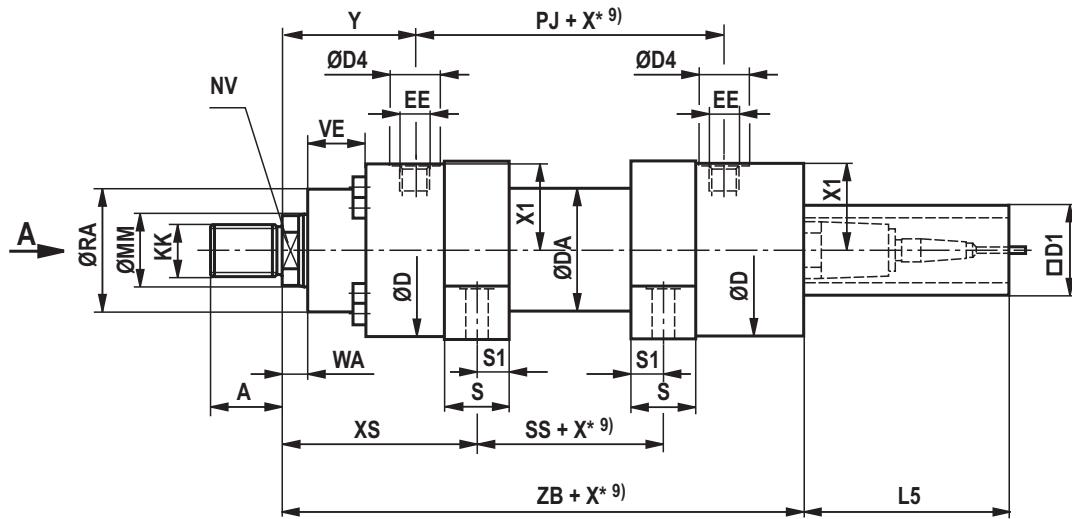

17) Line connection "M"

18) Trunnion nut with ØAL ≥ 125 mm either at head or at base side depending on the position of the trunnion (XV)

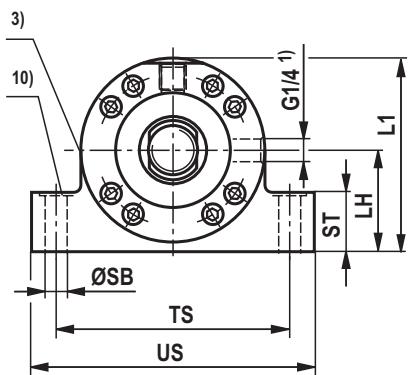

**Important installation information:** During installation, it must be ensured that the trunnion bearings are installed up to the trunnion shoulders. Any variation may reduce the product's service life.

Main dimensions see pages 10 to 21 and/or pages 24 to 35

ØAL = Piston Ø

X\* = Stroke length

1) Thread depth

2) Max. operating pressure for related flanges in bar

3) Flange porting pattern according to ISO 6162-2 tab. 2  
type 1 corresponds to flange porting pattern according to  
SAE 6000 PSI

## Subplates for valve mounting (SL and SV valve)

### Note:

Valves, fittings and piping are **not** included in the scope of delivery!

- 1 Port B to the piston side according to ISO 6164
- 2 Bore for locking pin
- 3 Adapter plate for type of mounting MT4 (included in the scope of delivery for MT4)
- 4 Line connection "B" dimensions see also pages 10 to 21 and pages 24 to 35.

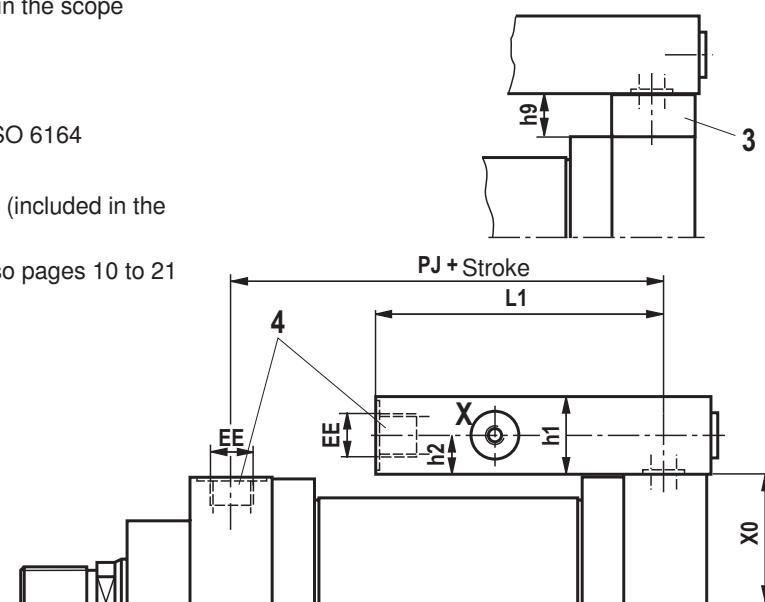

### Important notice

Subplates for SL and SV valves  
(isolator valves)

### Note:

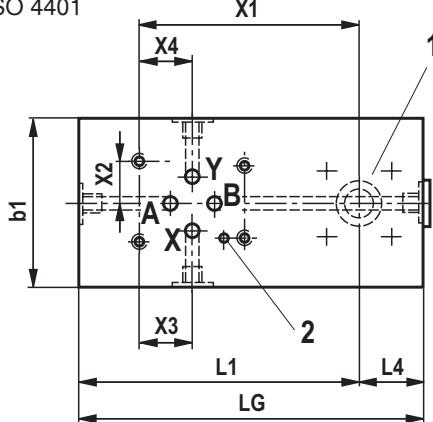

Seal designs T, G, L, R, S and V are not designed for the static holding function!

### Installation situation with MT4

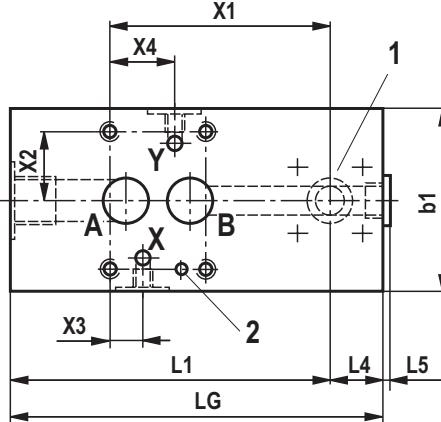

### Size 6

Porting pattern according to ISO 24340 form A and ISO 4401

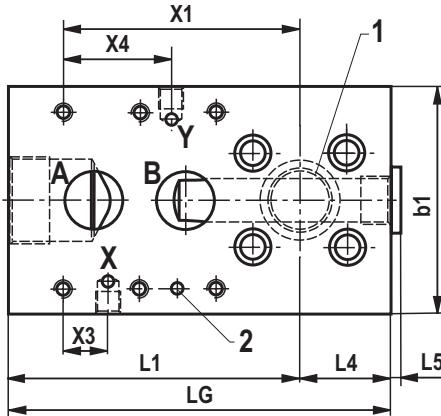

### Size 10 and 20

Porting pattern according to ISO 5781

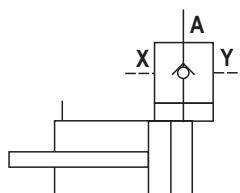

### Size 30

Porting pattern according to ISO 5781

### Piping symbol

### Size 16

Porting pattern according to ISO 24340 form A and ISO 4401

### Size 25

Porting pattern according to ISO 24340 form A and ISO 4401

With larger stroke lengths and depending on the piston diameter, the pipeline is mounted at the cylinder pipe using pipe supports. A maximum of two sandwich plates is admissible.

<sup>1)</sup> Not for MT4<sup>2)</sup> Only for MT4

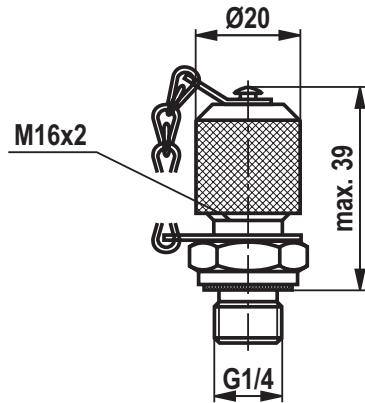

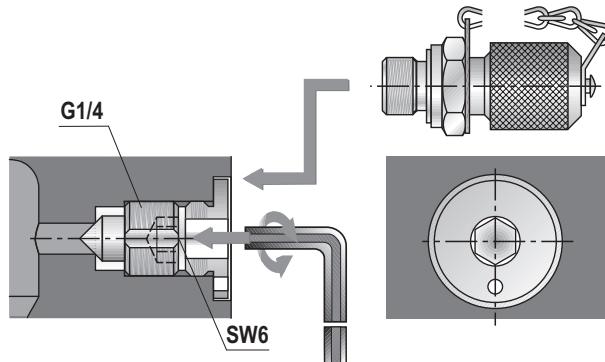

## Bleeding / measuring coupling (dimensions in mm)

By default, a patented safety bleeding device against unintended screwing out in head and base is delivered for all cylinders.

The port allows for the installation of a measuring coupling with check valve for pressure measurement or contamination-free bleeding. Measuring coupling with check valve function, i.e. it can also be connected when the system is pressurized.

- <sup>1)</sup> Bleeding: With view to the piston rod, the position is offset by 90° in relation to the line connection (clockwise)

Scope of delivery: Measuring coupling **G1/4**

MESSKUPPLUNG AB 20-11/K1 G1/4 with seal ring made of NBR

Material no. **R900009090**

ØAL = Piston Ø

- <sup>1)</sup> Throttle valve only with end position cushioning "E" (180° for bleeding)

## Proximity switch

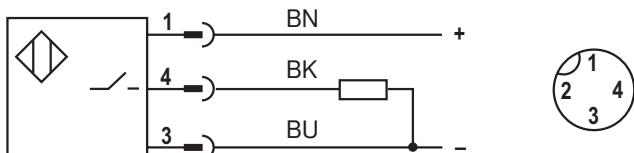

Inductive proximity switches are used as reliable end position control for hydraulic cylinders. They are an important element for the safe and exact monitoring of safety equipment, locks and/or other machine functions in their end position by means of the output of signals. The proximity switch which is high-pressure resistant up to 500 bar works in a contactless

manner. Consequently, it is wear-free. The proximity switch has been set at the factory. The switching distance must not be adjusted. The lock nut of the proximity switch is marked at the factory using sealing wax. On versions with proximity switch, the cylinders are equipped with proximity switches on both sides.

## Technical data (For applications outside these parameters, please consult us.)

Function type	PNP normally open contact	
Admissible pressure	bar	500
Operating voltage	V DC	10 ... 30
including residual ripple	%	≤ 15
Voltage drop	V	≤ 1.5
Rated operating voltage	V DC	24
Rated operating current	mA	200
Idle current	mA	≤ 8
Residual current	µA	≤ 10

## Position measurement system

---

The position measurement system that is pressure-resistant up to 500 bar works in a contactless and absolute manner. The basis of this position measurement system is the magnetostrictive effect. Here, the coincidence of two magnetic fields triggers a torsional impulse.

This impulse runs on the wave guide inside the scale from the measuring point to the sensor head. The running time is constant and almost independent of temperature. It is proportional to the solenoid position and thus a measure for the actual position value and is converted within the sensor into a direct analog or digital output.

## Technical data for the Profibus (For applications outside these parameters, please consult us!)

Output	Interface	Profibus-DP system
	Data record	Profibus-DP (EN 61158)
	Transmission rate	Max. 12 Mbit/s
Measurement accuracy	Travel resolution	1 µm to 1000 µm selectable as parameter
Velocity		With 5 µm travel resolution: 0.64 mm/s to 500 mm; 0.43 mm/s to 2000 mm; 0.21 mm/s to 4500 mm; 0.14 mm/s to 7600 mm Measurement length With 2 µm travel resolution: 2.5 times smaller values
	Linearity	< +/- 0.01 % Full Scale (Minimum +/- 50 µm)
	Repeatability	< +/- 0.001 % Full Scale (Minimum +/- 2.5 µm)
	Temperature coefficient	< 15 ppm/°C
	Hysteresis	< 4 µm
Application conditions	Operating temperature	-40 °C to 75 °C
Protection class	Profile:	IP 65
	Rod:	IP 67 with appropriate coupling plug assembly
Standards, EMC test	Interference emissions according to EN 61000-6-3	
	Interference resistance according to EN 61000-6-2	
Electrical connection	EN 61000-4-2/3/4/6, level 3/4, criterion A, CE-tested	
	Operating voltage	24 V DC (-15 / +20 %)

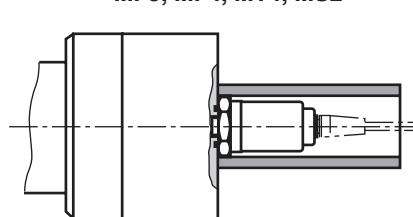

Please ask for the complete technical data!

### Types of mounting

**MP3, MP5**

**MF3, MF4, MT4, MS2**

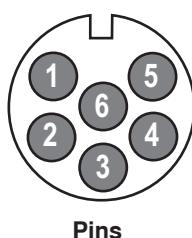

The output of the position measurement system is by default always rotated by 180° to the selected position of the hydraulic connection in the cylinder base.

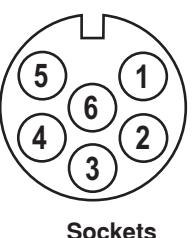

Mating connector is **not** included in the scope of delivery,  
must be ordered separately.

The specified dimensions are maximum values and may differ depending on the manufacturer.

The following values are excluded: CH, CN, EN, EU, KK.

**ØAL** = Piston Ø

<sup>1)</sup> Lubricating nipple, cone head form A according to DIN 71412

<sup>2)</sup> Related bolt Ø m6;  
related bolt Ø j6 with maintenance-free spherical bearing

<sup>3)</sup> Dimensions may differ depending on the manufacturer

<sup>4)</sup> **M<sub>A</sub>** = Tightening torque  
The swivel head must always be screwed against the shoulder of the piston rod.

Afterwards, the clamping screws must be tightened with the specified tightening torque.

<sup>5)</sup> **m** = Weight of swivel head in kg

<sup>6)</sup> **C<sub>0</sub>** = Static load rating of the swivel head

<sup>7)</sup> **F<sub>adm</sub>** = Max. admissible load on the swivel head during oscillatory or alternating loads

## Kinking

For the admissible stroke length with flexibly guided load and a factor of 3.5 for safety against kinking, please refer to the relevant table. For other installation positions of the cylinder, the admissible stroke length must be interpolated. Admissible stroke length for non-guided load on request.

Kinking calculations are carried out according to the following formulas:

### 1. Calculation according to Euler

$$F = \frac{\pi^2 \cdot E \cdot I}{v \cdot L_K^2} \quad \text{if } \lambda > \lambda_g$$

### 2. Calculation according to Tetmajer

$$F = \frac{d^2 \cdot \pi (335 - 0.62 \cdot \lambda)}{4 \cdot v} \quad \text{if } \lambda \leq \lambda_g$$

### Explanation:

$E$  = Module of elasticity in N/mm<sup>2</sup>

=  $2.1 \times 10^5$  for steel

$I$  = Geometrical moment of inertia in mm<sup>4</sup>

for circular cross-section =  $\frac{d^4 \cdot \pi}{64} = 0.0491 \cdot d^4$

$v$  = 3.5 (safety factor)

$L_K$  = Free kinking length in mm (depending on the type of mounting see sketches A, B, C)

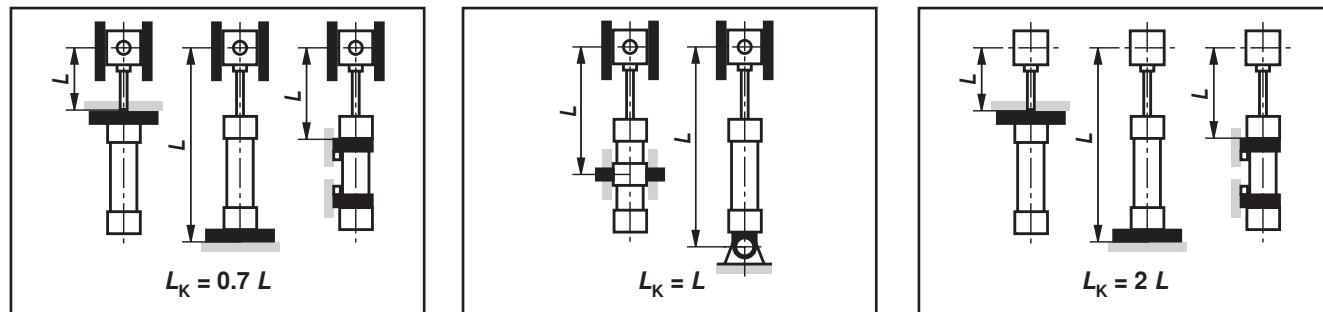

$d$  = Piston rod Ø in mm

$\lambda$  = Slenderness ratio

$$= \frac{4 \cdot L_K}{d} \quad \lambda_g = \pi \sqrt{\frac{E}{0.8 \cdot R_e}}$$

$R_e$  = Yield strength of the piston rod material

Influence of the type of mounting on the kinking length:

## Admissible stroke length (dimensions in mm)

1) Adm. stroke length

With longer strokes, an extended guide and/or the use of guide rings may be reasonable for increasing the service life, depending on the respective case of application and installation position. Recommendation on request.

<sup>2)</sup> With CSH3, observe the maximum stroke length "X\*max", pages 24 to 35

## End position cushioning

### End position cushioning:

The objective is to reduce the velocity of a moved mass, whose center of gravity lies on the cylinder axis to a level, at which neither the cylinder nor the machine into which the cylinder is installed is damaged. For velocities above 20 mm/s, we recommend the use of an end position cushioning feature, which absorbs energy without requiring the use of an additional device. It must, however, always be checked whether end position cushioning is also required for lower velocities with large masses.

### Damping capacity:

When decelerating masses via end position cushioning, the structural-inherent cushioning capacity must not be exceeded. Cylinders with end position cushioning can achieve their full damping capacity only over the entire stroke length.

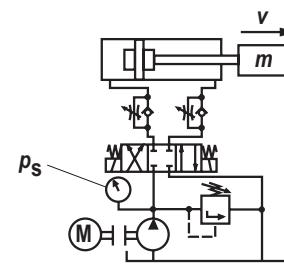

With the adjustable end position cushioning version "E", a throttle valve is additionally provided when compared with version "D". End position cushioning version "E" allows cycle times to be optimized. The max. damping capacity can only be achieved when the throttle valve is closed.

The calculation depends on the factors weight, velocity, system pressure and installation position. For this reason, mass and velocity are used to determine the characteristic  $D_m$  and system pressure and installation position to determine the characteristic  $D_p$ .

These two characteristics are used for verifying the admissible damping capacity in the "damping capacity" diagram. The intersection point of the characteristics  $D_m$  and  $D_p$  must always be below the damping capacity curve of the selected cylinder. The values in the diagrams refer to an average oil temperature of +45 to +65 °C with the throttle valve being closed.

For special applications with very short stroke times, high velocities or large masses, cylinders with special end position cushioning versions can be offered on request.

When fixed or adjustable stops are used, special measures must be taken!

### Formulas:

$$D_m = \frac{m}{10^K} ; K = kv(0.5 - v)$$

$m$  = Moved weight in kg

$v$  = Stroke velocity in m/s

$kv$  = See table page 60

### Extension for CDH3 and CSH3

$$D_p = p_s - \frac{m \cdot 9.81 \cdot \sin\alpha}{A_1 \cdot 10}$$

### Retraction for CDH3, CGH3 and CSH3; extension for CGH3

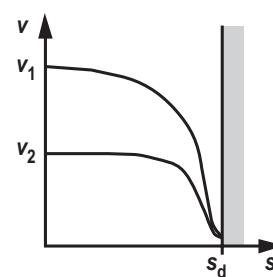

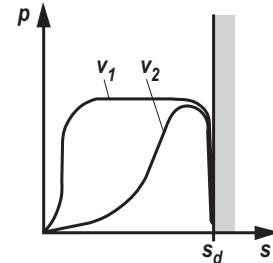

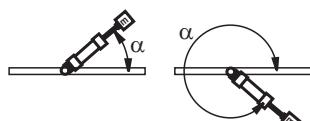

$$D_p = p_s + \frac{m \cdot 9.81 \cdot \sin\alpha}{A_3 \cdot 10}$$

$p_s$  = System pressure in bar

$A_1$  = Piston area in cm<sup>2</sup> (see page 4)

$A_3$  = Annulus area in cm<sup>2</sup> (see page 4)

$\alpha$  = Angle to the horizontal in degrees

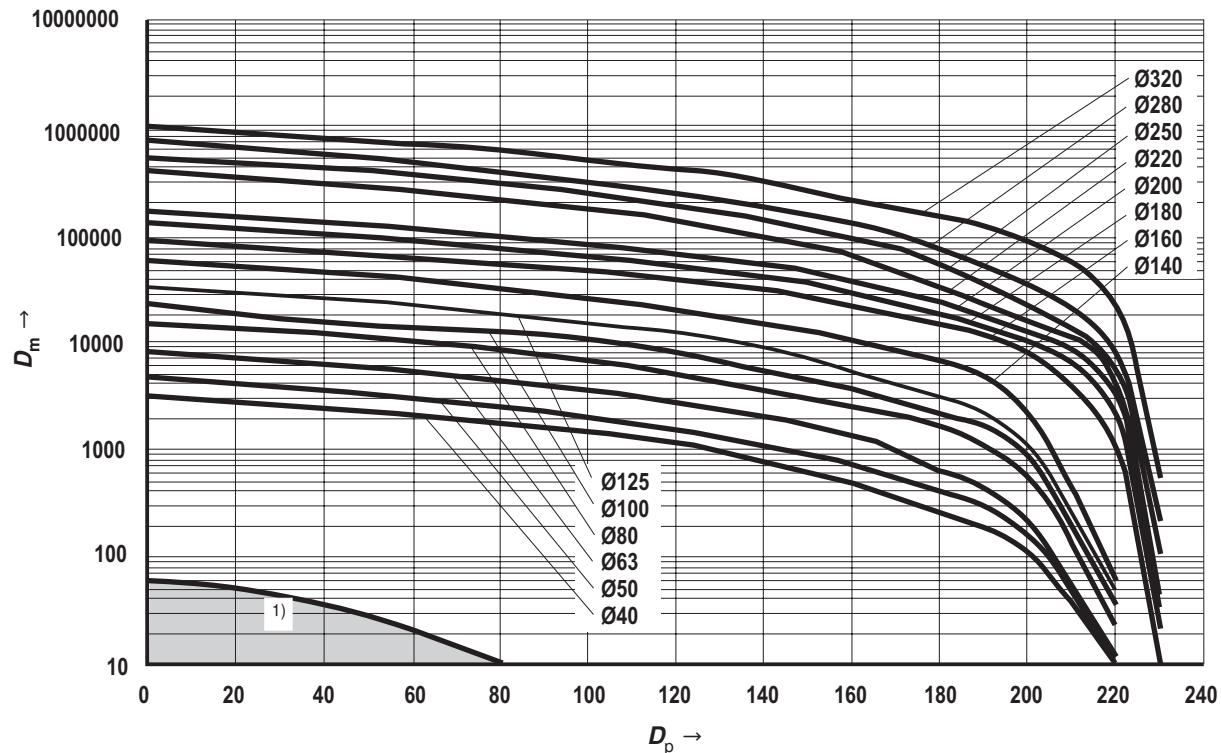

### Damping length

AL mm	40	50	63	80	100	125	140	160	180	200	220	250	280	320
<b>Head side</b>	21	20	23	25	25	25	33	33	37	37	76	81	86	90
<b>Base side</b>	21	20	23	25	25	25	33	33	37	37	76	81	86	90

## End position cushioning

$\text{ØAL mm}$	40	50	63	80	100	125	140	160	180	200	220	250	280	320
$k_v \textcircled{1}$	1.72	1.85	1.51	1.85	2.34	2.02	1.85	1.93	1.84	1.65	1.41	1.45	1.58	1.68

	Undissolved air in the oil <sup>4)</sup>	-	+	+	+	-	-	+	+	+

++ = very good

+ = good

+/- = conditional, depending on the application parameters

- = inappropriate

General technical data in corresponding data sheets will remain valid!

<sup>1)</sup> Moreover, observe the corresponding medium temperature range

<sup>2)</sup> Lower temperature limit -15 °C

<sup>3)</sup> Standard line connections not designed for that velocity

<sup>4)</sup> - Seal is destroyed / + Seal is not directly destroyed, leakage may occur

Generally, a medium temperature of approx. 40 °C is recommended. The specified values are to be regarded as guidelines; depending on the case of application, it may be necessary to check the suitability of the seal system.
