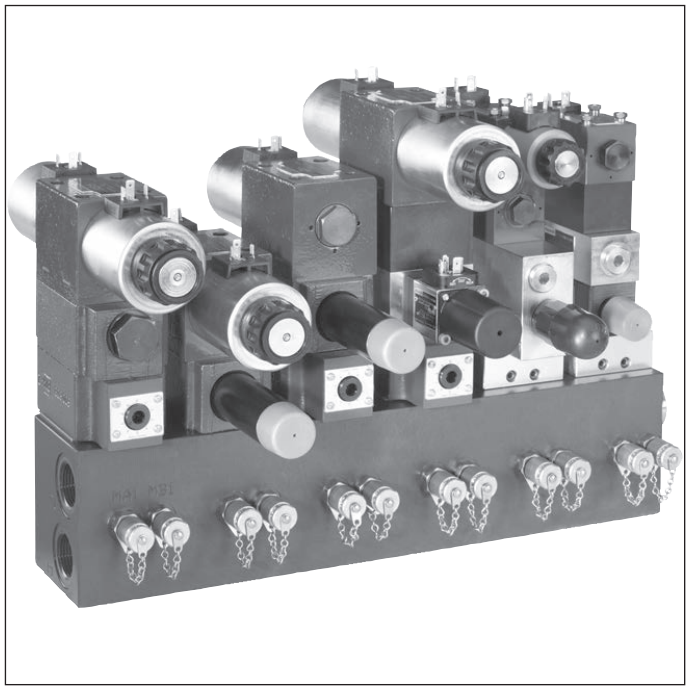
Manifolds

Type HSR 10

RE 48110
Edition: 2015-03
Replaces: 05.13



- Size 10
- Component series 15 and 35
- Maximum operating pressure 315 bar
- 1 to 8 stations

Features

- Base element for ready-for-connection controls in vertical stacking design
- Compact hydraulic controls
- Common pump line
- Common tank line
- Separate actuator ports of the stations
- Optional measuring ports in the actuator lines
- Mounting of size 10 sandwich plates and valves
- Mounting of size 6 sandwich plates and valves possible by means of an additional adapter plate

[1] Not possible with series 15 with lateral actuator ports

[2] Standard version (manganese or zinc phosphating)

Description

- Manifolds are the base element for ready-for-connection controls in vertical stacking design
- Manifolds of size 10 are available with 1 to 8 stations
- On each station, highly compact hydraulic controls can be built using vertically stackable sandwich plate valves in conjunction with shift valves or proportional servo valves of size 10 or size 6 (adapter plate required)
- All stations have a common pump port and a common tank port
- The pump line “P” and the tank line “T” are lead through the two front sides of the manifold
- Every station is equipped with separate actuator ports “A” and “B”
- Actuator ports are either located at the bottom or laterally
- Another option are measuring ports in the actuator channels “A” and “B”

Standard program including preferred types: HSR10

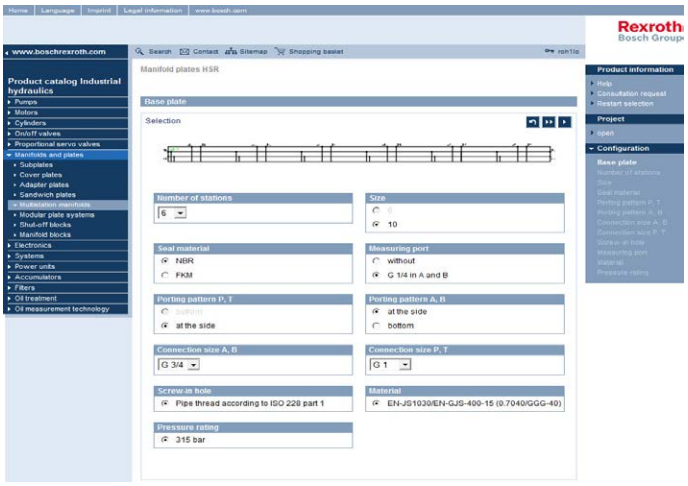
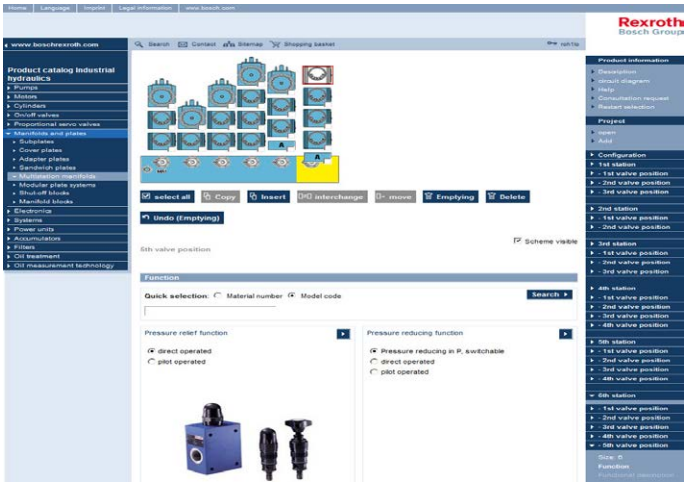
The manifold configurator on www.boschrexroth.com/ics/hsr

The configurator for HSR manifolds helps you configure your individual manifold or HSH vertical stacking in a simple and convenient way.
You can do this online by selecting relevant features of the base element (e.g. size, number of stations and port size) and the mounted product components (e.g. size, pressure settings, type of actuation).

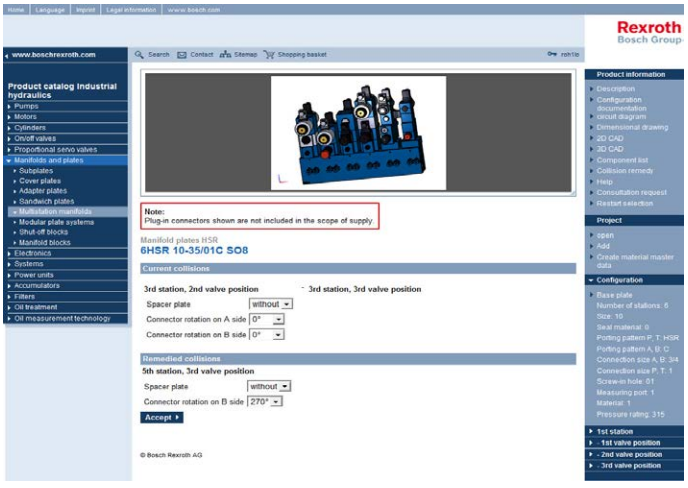
Note:
- You cannot use it for unfitted plates!



Thanks to the intuitive menu navigation, you are guided safely through the required configuration steps.
Related features are clearly arranged on one page.
By connecting components from various product areas, you can choose from a range of approx. 1000 different functions.



The individual components are selected either by type key or by material number using a configuration based on the circuit diagram or a “step by step” selection of the individual functional properties of the valve or the sandwich plate.



When the configuration is complete, a collision check offers various possibilities of fixing existing collisions. When the configuration is finished, you can have the complete configuration documentation sent to you via email including material list, circuit diagram, 2D drawing and 3D model (STEP). This is done by way of an automatic request to your local distributor who will promptly contact you and send you an offer.

Mounting screws depending on valve fitting

Screw selection table for vertical stacking in combination with size 10 directional valves

Number of sandwich plates	Clamping lengths of sandwich plates	Hexagon socket head cap screws according to ISO 4762; stud screws according to DIN 939		Stability	Material no.
1	1 x 50 mm	M6 x 90	ISO 4762	10.9	R913000259
2	2 x 50 mm	M6 x 140	ISO 4762	10.9	R913000443
3	3 x 50 mm	M6 x 190	DIN 939	10.9	R900014968
4	4 x 50 mm	M6 x 240	DIN 939	10.9	R900024864
5	5 x 50 mm	M6 x 295	DIN 939	10.9	R900012024
For the torques of the screws, please refer to the corresponding data sheets of the valves					

☞ **Note!**

- The clamping lengths of the mounted sandwich plates and valves must be checked for each individual case.

Example for mountable sandwich plates with a clamping length of 50 mm:
Pressure reducing valve ZDR 10 D...-5X/..., pressure relief valve ZDB 10 V...-4X/..., double check valve Z2S 10...-3X/..., check valve Z1S10...-.../, double throttle check valve Z2FS 10...-3X/V, pressure switch with sandwich plate HED 8 OH2X/...

Directional valve	Hexagon socket head cap screws according to ISO 4762;		Stability	Material no.
direct operated directional valve WE 10	M6 x 40	ISO 4762	10.9	R913000058
pilot operated directional valve WEH 10	M6 x 45	ISO 4762	10.9	R913000258
direct operated proportional valve WRA 10, WRE 10	M6 x 40	ISO 4762	10.9	R913000058
pilot operated proportional valve WRK 10, WRZ 10	M6 x 45	ISO 4762	10.9	R913000258
For the torques of the screws, please refer to the corresponding data sheets of the valves				

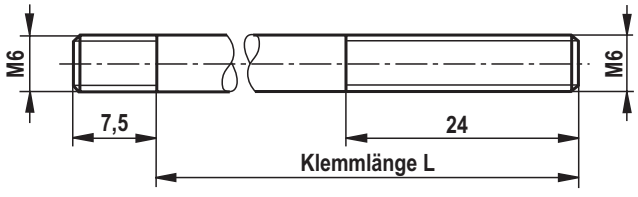
☞ **Note!**

- The screw selection table does not apply to directional valves in their seawater-protected version due to differences in the clamping lengths on the directional valve (dimensions see data sheets – seawater-protected directional valves).

☞ **Note!**

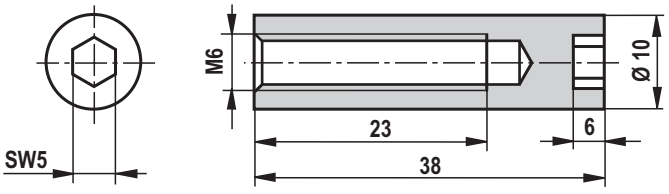
- Directional valves with central ports “D”, “DL”, “DZ” and “DZL” can only be used with hexagon socket head cap screws or stud screws and round nut according to ZN 10035, material no. R913020310.

Stud screw M6 DIN 939, property class 10.9



L see screw selection table

Round nut ZN10035-M6-ST, material no. R913020310



Project planning information

Pressure reducing valve in conjunction with double check valve
The pressure reducing valve ZDR..DA (pressure reduction in channel A) **must** always be installed between the directional valve and the double check valve Z2S... This ensures that the double check valve can block in a leak-free manner.

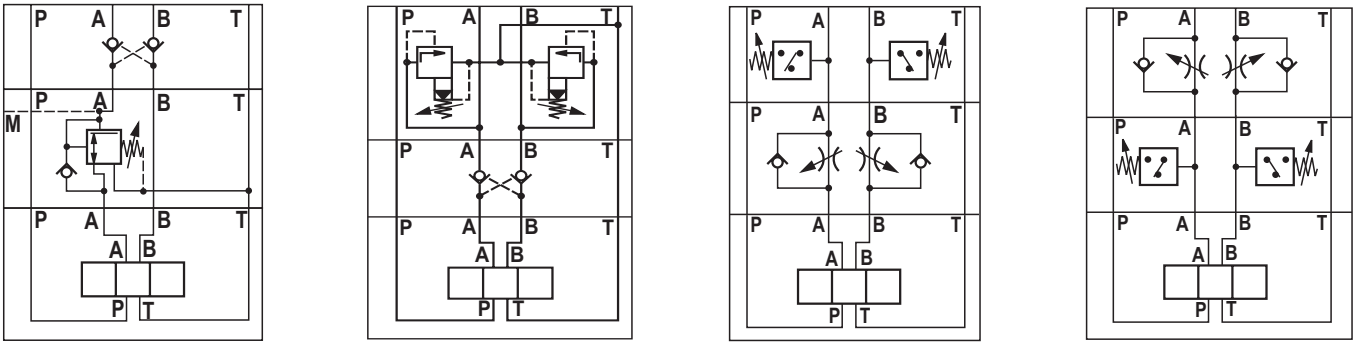
Pressure relief valve in connection with double check valve
Leak-free blocking of the actuator is **not** possible if a pressure relief valve ZDB../Z2DB.. is effective in channel A and/or B and a double check valve is installed.

☞ **Note!**
The installation of sandwich plates with two pressure switches on manifolds with lateral ports “C” is **not possible.**

Pressure switches in connection with twin throttle check valve

Supply control
The pressure switch HED 8 OH, effective in channel A and/or B, is installed between the subplate and the twin throttle check valve Z2FS.

Discharge control
The pressure switch HED 8 OH, effective in channel A and/or B, is installed between the directional valve and the twin throttle check valve Z2FS.



The illustrated sections of circuit diagrams are examples. The project planning information must also be observed for valves with a similar function.

Sandwich plate (with or without separate port X, Y) **for use with pilot operated valve**

☞ **Note!**
To seal channels X and Y on manifold version “C” (lateral actuator ports), you need the sandwich plate with material no. **R900320784** (NBR) or **R900321346** (FKM)!

☞ **Note!**
For all designs, the external pilot oil supply is only possible with the sandwich plate with material no. **R900320785** (NBR) or **R900321347** (FKM)!
